School Science Review

Celebrating 100 years of SSR

Framing the secondary science curriculum

FSC A level biology fieldwork

www.field-studies-council.org/alevelbiology

Up to **5** named practicals ticked off*

All **5** practical endorsement criteria assessed

3 stats tests taught

3 different ecosystems studied

36 hours of teaching

Just **5** days off the school timetable

FSC

School Science Review

The ASE's journal for science education 11–19

<i>Editor</i>	Geoff Auty
<i>Special Issue Editor</i>	Anthony Tomei
<i>Executive Editor</i>	Andrew Welsh
<i>Assistant Executive Editor</i>	Helen Johnson
<i>Book Reviews</i>	Miriam Chaplin
<i>App Reviews</i>	Susan Judge
<i>Websearch</i>	David S. Moore
<i>Editorial contact ASE</i>	Jane Hanrott
<i>Design/typesetting</i>	Andrew Welsh

School Science Review is published in March, June, September and December and sent to all Ordinary Members of the ASE free of charge. It is also available on subscription from the ASE.

Authorisation is granted by the Association for Science Education for items from *SSR* to be photocopied for personal use or for the use of specific students. Permission is needed to copy or reproduce for any other purpose and requests should be addressed to the ASE.

The contents of this journal do not necessarily represent the views or policies of the ASE, except where explicitly identified as such.

Contributing to SSR

We welcome contributions for all sections of *School Science Review*.

These can be emailed to The Editor, ssreditor@ase.org.uk, or posted to The Editor, *School Science Review*, ASE, College Lane, Hatfield, Herts AL10 9AA. Detailed advice on the submission of articles and Science notes is available on the ASE website at: www.ase.org.uk/content/submission-guidelines.

Themes being considered for the future for which submissions are invited:

- Everyday science
- The periodic table

- 4 Editorial**
- 5 School Science Review – a century of expanding, contracting and changing faces**
Geoff Auty
The current Editor looks back at changes in size, style and content as the journal reaches its 100th annual volume
- 11 Science notes**
- 11 **A long-term STEM project based on a plant-watering device** *Steven Weir*
13 **Pteranodon flying – or how I learned to love paperclips and modelling clay** *Gareth Price*
16 **Double-slit interference: the moving picture** *Iain MacInnes*
- 19 Theme editorial: Framing the secondary science curriculum**
Anthony Tomei
- 21 Where next for the curriculum in the sciences?**
Mike Edmunds, Libby John, Gareth Price and Simon Rees
An introduction to the work of the UK's three main professional bodies for science on developing curriculum frameworks
- 23 Developing a framework for the biology curriculum**
Lauren McLeod
The Royal Society of Biology is developing a framework for a coherent 5–19 biology curriculum, aiming to inform curriculum developers and ensure that students are prepared as scientists and citizens
- 30 Towards an ideal chemistry curriculum**
Danièle Gibney
The Royal Society of Chemistry is developing a framework for a relevant and coherent chemistry curriculum for all students
- 36 Guidelines for future physics curricula**
Charles Tracy
The Institute of Physics is developing a framework that will give school students a rewarding and productive experience of physics and lasting skills, knowledge and understanding
- 44 Response to the professional bodies' articles on developing UK science curriculum frameworks**
John Holman
The ASE's President-Elect draws together the implications of the work carried out by the three professional bodies for science to date and highlights issues still to be addressed
- 47 Beyond 2020: ten questions for science education**
Michael J. Reiss
Twenty years after the Nuffield Foundation's *Beyond 2000* report, is there still room for its vision of scientific literacy for all, and what are the big questions for science education?
- 53 The US Next Generation Science Standards: what are they and what do they offer?**
Jonathan Osborne
How are the new science standards adopted in the USA in 2014 for ages 5–18 innovative, and do they have implications for science teaching and learning in the UK?
- 61 Balanced science: the story so far**
Phil Ramsden
Efforts to introduce a balanced science curriculum from the mid-19th century to the present day
- 66 Play your part in influencing the science curricula of the future**
Marianne Cutler
The ASE invites its members to reflect on the curriculum developments outlined in the articles by the RSB, RSC and IOP
- 67 Teaching chemical concepts with LEGO bricks**
Christopher Talbot
There is a wide range of teaching opportunities in the chemistry classroom using traditional LEGO bricks
- 74 Wrong answers to stimulate critical analysis**
John J. Turner
An exploration of three techniques designed to use the concept of incorrect or wrong solutions to stimulate critical analysis of mathematical principles.
- 84 Questions in class**
Sarah Longshaw
The role of questioning in the science classroom, built on the author's experience of trying to develop the skill
- 88 Reviews; 92 Science websearch; 96 SSR special issues and Advertisers index**

Editorial

This edition of *SSR* looks different. In education, we teach about scientific method. We suggest that scientists start with a theory – an idea. In this case, the idea is that the journal would be better in the popular A4 size. The next step is the experiment. In this example, the outcome is in your hands. You are holding the evidence; having an A4 edition to inspect. I will explain more about that on the page opposite, linked to the fact that *SSR* is now in its 100th year. I discovered just before writing this comment that that is 4 years longer than *Radio Times* has been in existence. Also, I have been associated with *SSR* for 50 years (from when my first submitted article appeared).

Following my historic account, we open *Science Notes* with a practical article from Steven Weir, explaining a technique for watering plants during holidays. This is aimed at home use but could equally apply to school sites that have gardens only fully tended in term time. Gareth Price offers an alternative design to the basic paper aeroplane, which generates thinking about how things can fly. The last note is from Iain MacInnes who has probably been contributing longer than I have. He offers an alternative mathematical solution to establishing the link between fringe width and wavelength in the Young's slits experiment – not the normal textbook version that physics teachers will know.

A meeting to consider the way forward in science education was held at the beginning of the year. Presentations from some high-profile contributors on the background and the future, and thoughts from representatives of the three major subject associations, have created the main theme in this edition, which has been coordinated by Anthony Tomei who provides an introduction on p. 19.

In the major articles from individual teachers, frequent contributor Christopher Talbot describes how to teach aspects of chemistry using LEGO bricks. If my grandchildren are typical, students will find this a fascinating alternative to standard methods of molecular modelling.

A very different offering comes from John Turner. As a way of developing understanding in the mathematical aspects of science, he suggests developing wrong answers and then challenging students to find the flaw. John now works in a university, but the technique could be adapted to any level in the 11–19 age range, but especially 16–19.

Finally, reporting a presentation at the ASE Annual Conference, Sarah Longshaw has provided an article on methods of asking questions in class to enhance effective learning. This was held over from the theme section of our previous edition.

Geoff Auty

Editor, *School Science Review*

Health & Safety

For all practical procedures described in *SSR*, we have attempted to ensure that:

- all recognised hazards have been identified;
- appropriate precautions are suggested;
- where possible procedures are in accordance with commonly adopted model risk assessments;
- if a special risk assessment is likely to be necessary this is highlighted.

However errors and omissions can be made, and employers may have adopted different standards. Therefore, before any practical activity, teachers should always check their employer's assessment. Any local rules issued by their employer must be obeyed, whatever is recommended in *SSR*.

Unless the context dictates otherwise it is assumed that:

- practical work is conducted in a properly equipped laboratory;
- any mains-operated and other equipment is properly maintained;
- any fume cupboard operates at least to the standard of CLEAPSS Guide G9;
- care is taken with normal laboratory operations such as heating substances or handling heavy objects;
- good laboratory practice is observed when chemicals or living organisms are handled;
- eye protection is worn whenever there is any recognised risk to the eyes;
- fieldwork takes account of any guidelines issued by the employer;
- pupils are taught safe techniques for such activities as heating chemicals or smelling them, and for handling microorganisms.
