

NOTICEBOARD

British Science Week 2020

Schools are invited to participate in British Science Week in March 2020, which will be themed around 'Our diverse planet'. Early years and primary activity packs will be ready to download from January 2020 (and taster packs from November 2019) from:

www.britishsienceweek.org/plan-your-activities/activity-packs

Meanwhile, the 2019 activity pack themed around 'Journeys' is still available to download and use.

New Primary Science feature

Following the 'Science behind the wow' issue of *Primary Science* (issue 159), we have decided that this will become a regular feature in the publication. Watch out for *Science Swap Shop* being interspersed with 'wow' activities you can do in class, with support around the science behind

the wow and follow-on questions and investigations to make the most of wonder moments!

Follow Primary Science on Twitter

Primary Science has its own *Twitter* handle! You can follow us using **@PriSciJournal**. You will find out about new members of the editorial board, upcoming themes and other in-the-moment news.

Special issues of Primary Science

A new special issue of *Primary Science* with open access for you on the ASE website is now available for download to share with colleagues and friends. This was produced in collaboration with Wellcome's *Explorify* resource and, as well as being online, a paper copy should have arrived through the post to your school: find it if you haven't seen it!

Early in 2020, a second special issue, with conference papers from the Primary Science Education Conference (PSEC) run by PSTT in Edinburgh in June 2019, will also be available online.
